collection

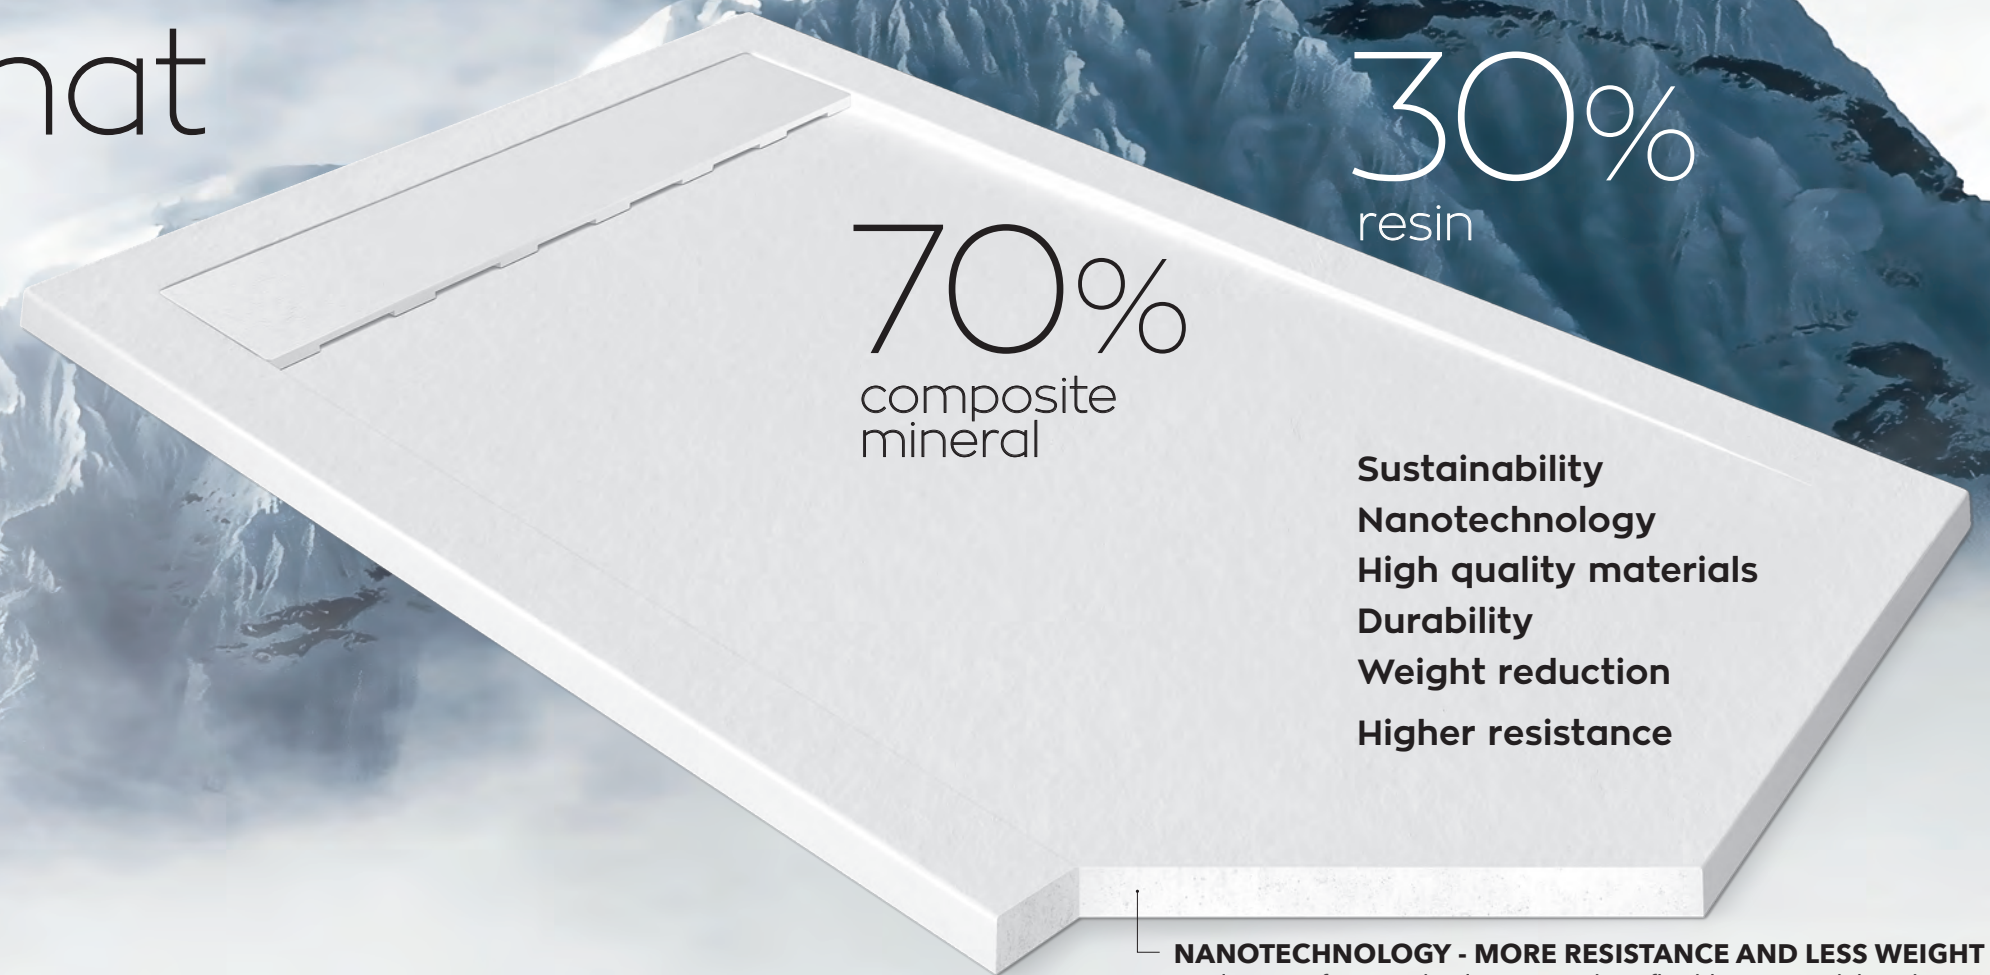

# technology that respects the planet

## nanotechnology

Ohmyshower manufactures its products combining composite mineral and nanotechnology, in addition to the use of materials that favor the sustainability of the planet. It combines elastic resins with mineral fillers and a layer of the latest generation gel coat that result in products with greater durability and impact resistance, as well as significantly reducing their weight.

## Shower trays

**Sustainability**  
**Nanotechnology**  
**High quality materials**  
**Durability**  
**Weight reduction**  
**Higher resistance**

**NANOTECHNOLOGY - MORE RESISTANCE AND LESS WEIGHT**  
 Application of nanotechnology to combine flexible resins with low-density mineral microparticles.

### CHARACTERISTICS

#### COMPOSITION

Polyester resin and the latest mineral fillers.

#### OUTER LAYER

Highly resistant, durable non-slip Gel Coat.

#### TEXTURE

Antislip Class C3.

## Standard and DEKOR wall panels characteristics

The **POLYCARBONATE** wall panels are 0.237" thick. They are the ideal solution to replace a bathtub for a shower tray and no building work is required. Flat finish with a slightly sandy granulated effect. They are waterproof and water-repellent, so they improve insulation and guarantee protection against moisture and dampness. They can be easily cut, if their size has to be adjusted to fit them on the walls. They are practically unbreakable because they are quite flexible and extremely light, which means that a large panel can be held up and fit by just one person. As they are so light they are perfect to fit on drywall surfaces that do not support heavy loads.

The colour tones of all DEKOR designs can vary caused by many reasons.

REPAIR KIT

PAINT KIT

SHOWERBAND SEALING BAND

The Showerband Kit is a 118" long, multiaxial and sealing band flexible to ensure the seal of the joint with walls and floors in the installation of shower trays, bathtubs and other sanitary ware. It has high adhesion and good bonding in a wide range of substrates. It remains flexible throughout its useful life. In addition to water, it is an effective barrier against gases such as methane and radon.
